

Risman Adnan

Developer and Platform Evangelism Lead, Microsoft Indonesia

Risman Adnan is DPE Lead of Microsoft Indonesia, responsible for company's relationships with key strategic innovation partners, cloud software developers, IT pros and developers. He also leads Microsoft Indonesia strategy on winning top apps on devices, transforming technical audiences to devices and services, as well as creation of next generation cloud solution on Windows Azure.

Before leading DPE team in Indonesia, Risman served as AHQ Developer Evangelist covering SEA and emerging subsidiaries. He started at Microsoft Indonesia in September 2004 as Developer Evangelist to land .NET technologies and lead outreach strategy to developer community. Prior to Microsoft, Risman spearheaded the backbone-engineering strategy for Petrolink Ltd and performed several engineering roles at Praisindo Technology. He also served as founder of INDC and WSS-ID – the largest developer and IT Pro communities with more than 100k members in Indonesia. With his contribution to Indonesia developer ecosystem, SWA magazine awarded him as the most wanted developer in 2007.

Risman has more than 13 years of experiences in software engineering and developer ecosystem relation. He taught himself to code since junior high school and began his career as research staff member of Semiconductor Lab University of Indonesia. He earned his bachelor's and master's degrees honored with summa cum laude in theoretical physics from University of Indonesia. During his master degree (1998-2000), he served as teaching and research assistant for semiconductor and computational physics and published more than 10 scientific journals. Risman is married and has three children.
